BBO's ACBL card: slots and the card fields they fill

376 slots on BBO's card: 109 text slots (E_), 168 checkboxes (C_), 99 lead circles (L_). Read from https://webutil.bridgebase.com/v2/acblcc/acblCC.html.
Mapped: 109 text slots, 162 checkboxes, 99 lead circles. A slot the map doesn't cover still goes back to BBO unchanged when the card came from BBO (the export starts from _bbo_raw); a card made in the editor has nothing for it.
Lead circles are read by a rule in js/bbo.js (ls-akx-a: vs suits, from AKx, the A), not by the map. Amber: the holding is not in the spec, or the export writes the circle under another key.
The 2C lines (2COther1-6) and the names slot are rules in js/bbo.js too.
BBO's page uses the ids L_ls-kj10x-j, L_ls-kj10x-10 for two circles each (numbered a and b); BBO can only read the first.
